Assignment Title: Build a Simple User Management Dashboard

Task Description:

Build a simple admin dashboard using **Next.js 15 (or the latest version)** that does the following:

1. Create a **Users page** that:
    - Calls a dummy API (e.g., https://jsonplaceholder.typicode.com/users)
    - Displays a list of users in a **table or card view** (name, email, phone)
    - Handles **loading** and **error states**
2. Create a **User Detail page**:
    - When you click on a user, navigate to /users/[id]
    - Fetch and display the detailed info of that user from the API
3. (Optional but bonus) Add a simple **Create New User** form (doesn't have to persist, just show the flow)

Requirements:

- Use **Next.js App Router**
- Use **Server Components** where it makes sense
- Use **Client Components** for interaction
- Basic styling (**TailwindCSS** recommended but optional)
- Folder structure should be clean and scalable
- Proper use of **async/await**, error handling, and types (if TypeScript is used)

Expected outcome:

- A clean and functioning Next.js project
- Clear separation of components, pages, and logic
- Good UI/UX even if minimal

How to Submit:

- Share a public GitHub repo or send the zip of your project.

- Add a simple README explaining how to run the project.

What we will evaluate:

- Code structure and readability
- API integration approach
- Next.js 15 conventions (server/client separation, App Router, etc.)
- Error handling and loading state management
- UI clarity (no need for fancy design, but should be usable)
- Overall time and task management
